Part list

No.	PART	QTY	IMAGE	☒
1	Right bracket	1		
2	Left bracket	1		
3	Flange Hex bolt M8x16 DIN-6921	4		

BISON GEAR

List of necessary tools¹:

- 12 mm wrench
- 13 mm wrench
- marker

Installation:

The Ditch Light brackets are designed to provide an additional mounting option for installing lights, improving illumination around the vehicle. The installation process is simple, requires no drilling, and uses the factory front mask mounting holes.

Follow the steps below to install product correctly:

1. Start by preparing the product parts and gathering the necessary tools.
2. Lift the front car mask and locate the bolts on the mask hinges.

¹ NOTE: The tools **are not** the part of the set.
bison-gear.com

3. Before start mounting the bracket, mark the position of the hinge on the mask. This ensures you can screw the mask and hinge back in the exact original position..

Remember !!!

Do not unscrew both bolts at the same time.

4. Unscrew the bottom bolt first and place the bracket on the hinge arm **(do not place it between the hinge and mask – it is incorrect)**.
Pre-screw the bracket using The M8x16 bolt (from the installation kit).
Next, repeat the same procedure for the upper bolt.
5. Adjust the mask to match its original position using the marks you made in point 3. Regulate the position of the bracket and tighten the bolts (tightening torque – 15-18 Nm)
6. Repeat the procedure to install the second bracket.

Make sure that everything is mounted properly, and all the bolts are tightened. If everything is correct, your work is done.

After driving 50km, check all the bolts and retighten them if necessary.
