

BISON GEAR

INEOS Grenadier Roof Rack OX Pro Installation Guide

RR-GRND-OX

BISON GEAR

💡 Before you start

The Roof Rack is a 2-in-1 model – it can be used either as a standard front wind deflector or with an LED bar cutout, allowing installation of a 42" LED Bar lamp. The base version comes with the LED cutout, which can be easily converted to the standard version by attaching a specially designed cover. This converts the roof rack into the standard version.

Before installation:

- Familiarize yourself with these instructions.
- Ensure that all listed parts and hardware are included in the package.
- Prepare a flat surface or floor with a minimum area of 3 x 2.5 meters.
- Gather the required tools.
- Installation requires two adults.

⚙️ Part list

No.	PART	QTY	IMAGE	
1	Profile 90x25 L=1510	9		<input checked="" type="checkbox"/>
2	Profile 30x60 L=1510	1		<input type="checkbox"/>

BISON GEAR

3	Side extra rail	2	
4	Front rail R	1	
5	Front rail L	1	
6	Back rail	2	
7	Small connector	2	
8	Large connector	2	

BISON GEAR

9	Large roof bracket	4		
10	Small roof bracket	12		
11	Support bracket	4		
12	Clamp	4		
13	Wind deflector	1		

BISON GEAR

14	Wind deflector cover	1		
15	Flange nut M6 DIN 6923	4		
16	T-slot M6 nut	5		
17	Flange nut M8 DIN 6923	44		
18	Hex Bolt M6x12 ISO 7380-2	5		
19	Bolt M6x16 ISO 7380-2	28		
20	Bolt M8x25 ISO 7380-2	76		
21	T-Bolt M8x20	8		
22	Plastic retaining clips	10		
23	Rubber Edge protection	1 mb		

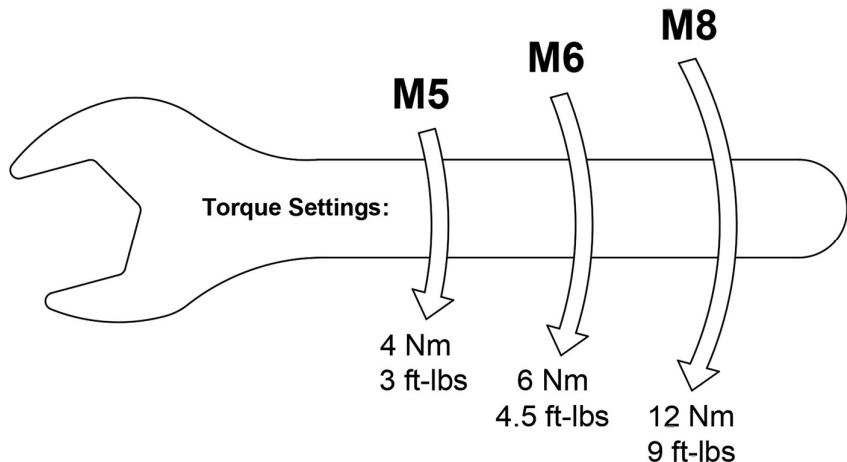

BISON GEAR

☒ List of necessary tools¹:

- TX30 Torx key
- 4 mm Allen Key (Hex)
- 5 mm Allen Key (Hex)
- 10 mm wrench
- 13 mm wrench
- cutters
- hammer
- wipe
- *(optional) torque wrench

☒ Torque settings:

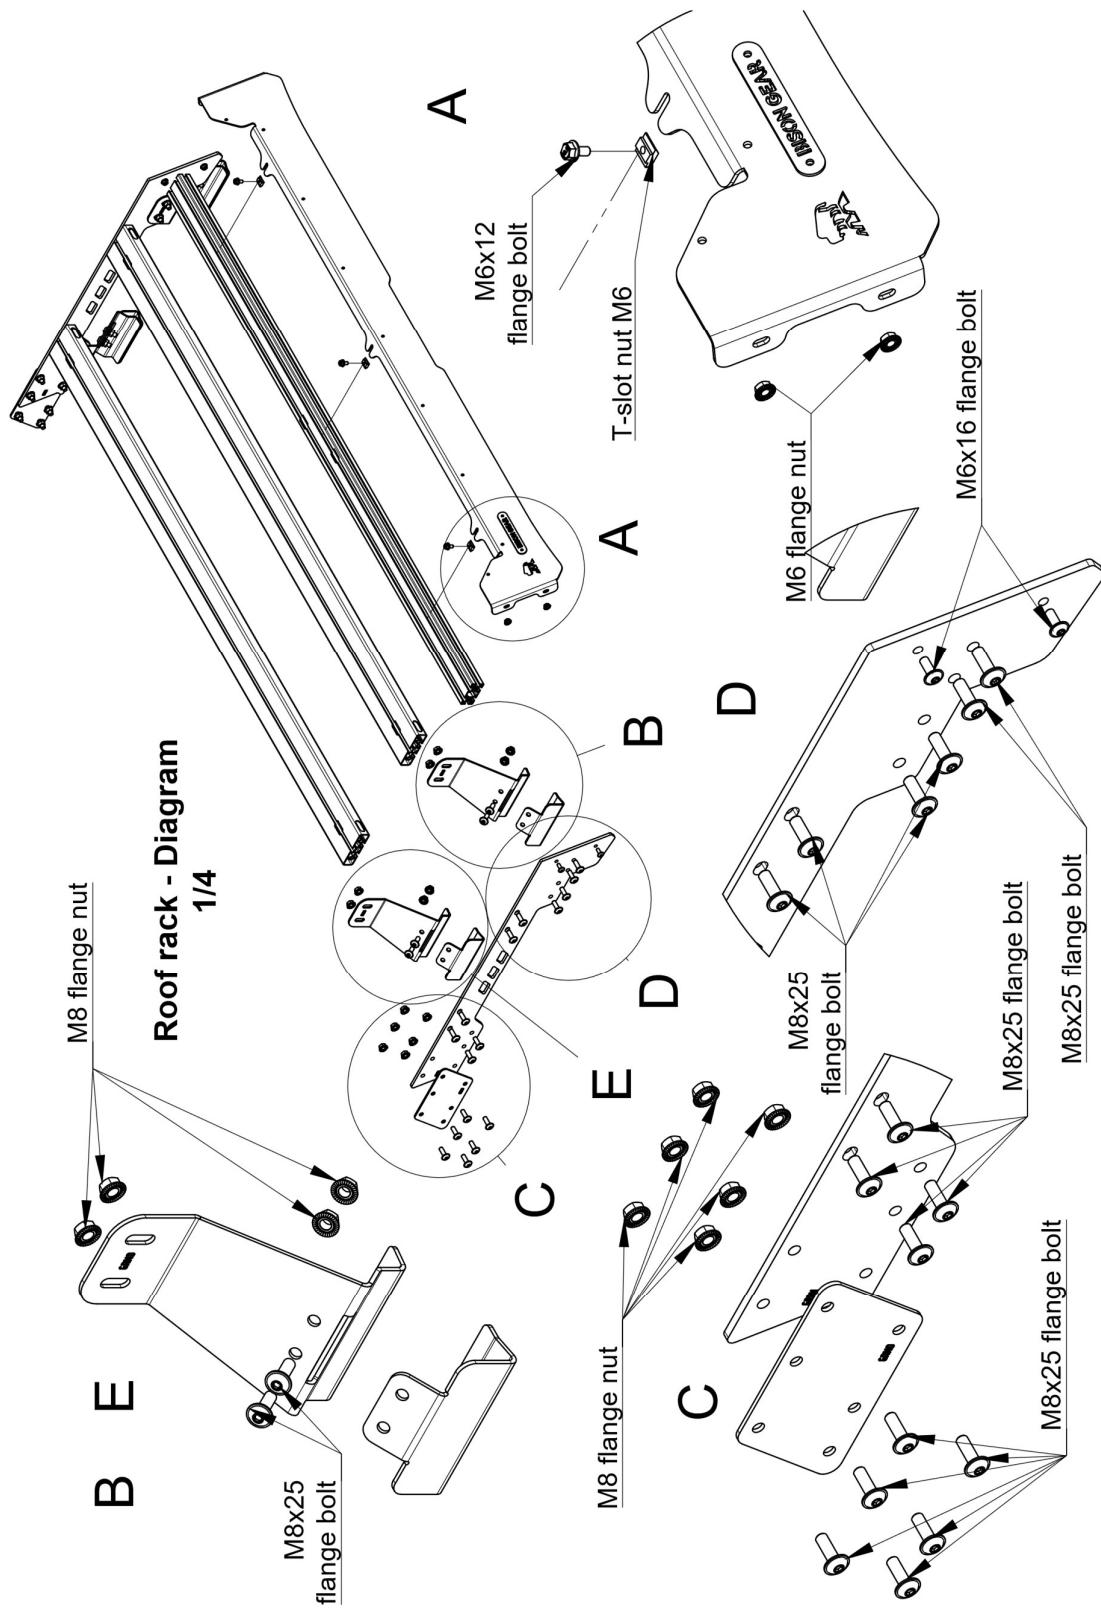

During assembly, use the recommended tightening torques for screw, unless other parameters are specified for a given connection.

¹ NOTE: The tools **are not** the part of the set.

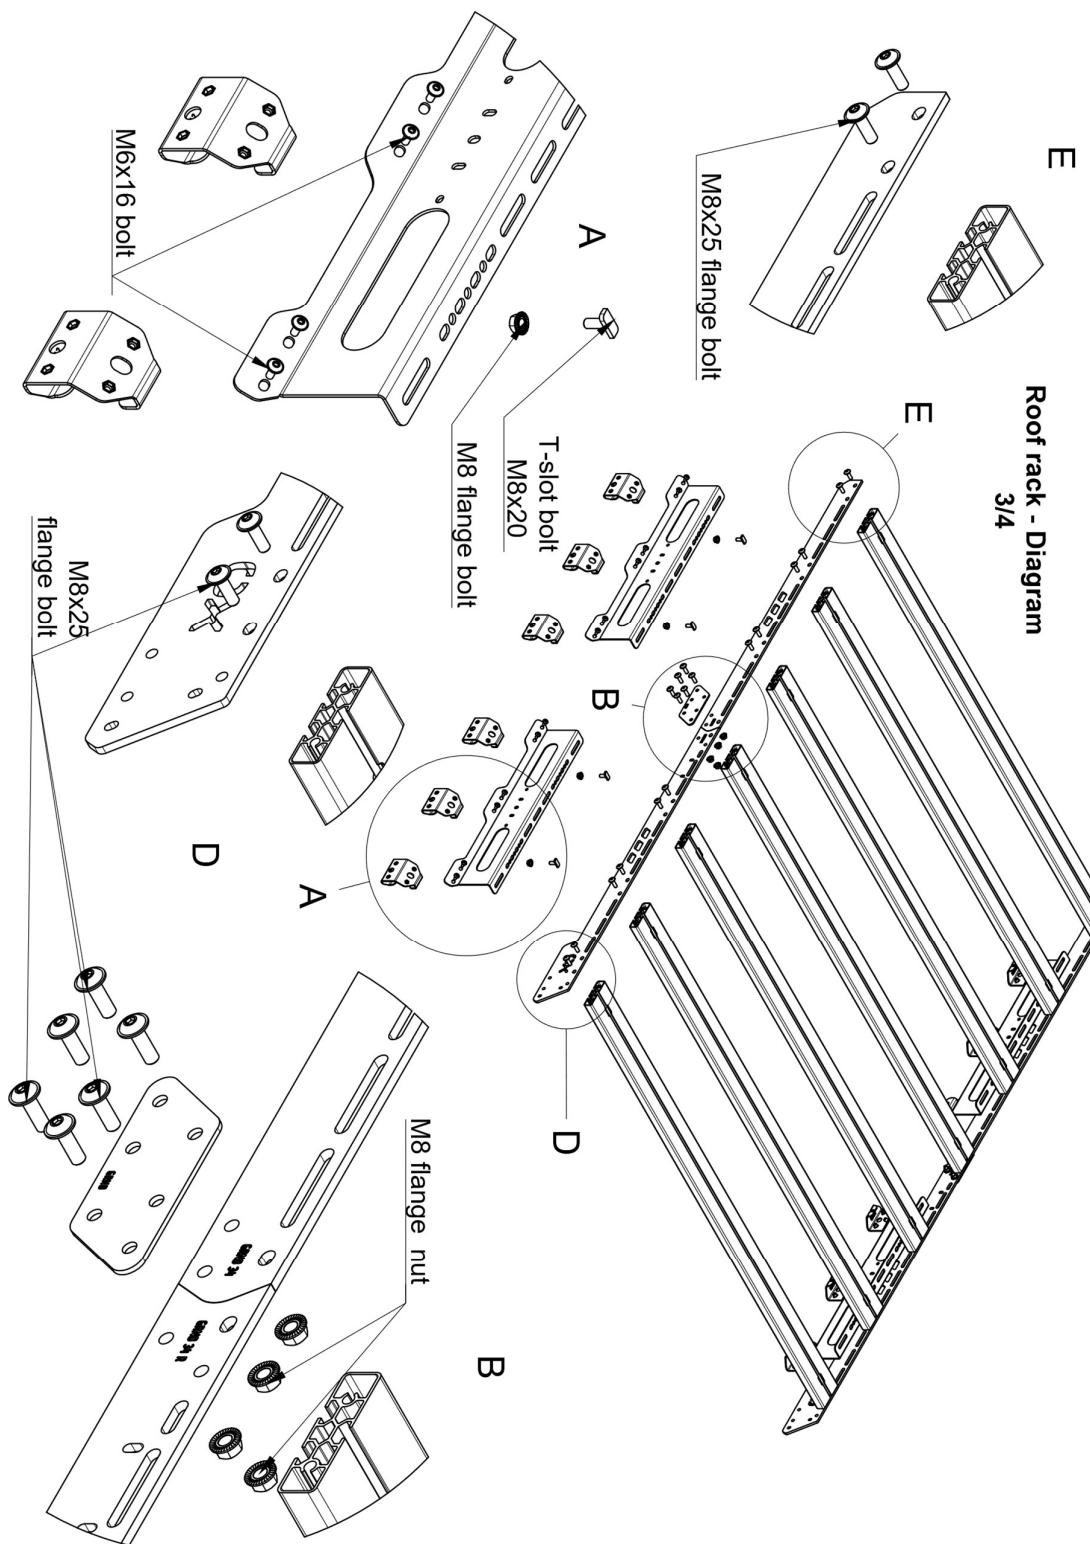

BISON GEAR

⚙️ Installation:

Before you begin, review the **Roof Rack Diagram** on **pages 7 and 8**.

The exploded views illustrates how to assemble and mount the roof rack parts.

The roof rack consists of two sections: a large section ($\frac{3}{4}$ of the total length) and a small section ($\frac{1}{4}$ of the total length). The larger section forms the main part of the rack, while the smaller section serves as an extension.

The following steps will describe how to join the two parts together and then proceed with the installation of the complete roof rack onto the vehicle.

The Roof Rack is a 2-in-1 design – it can be used as a standard front wind deflector or with an LED bar cutout that allows installation of a 42" LED Bar lamp.

The base version includes the LED cutout, which can be easily converted to the standard version by attaching a specially designed cover. This transforms the roof rack into the standard version. The choice is yours, and you can switch between versions at any time.

The set also contains 2 additional T-slot M6 nuts and 2 M6×12 flange hex bolts for LED bar installation.

Follow the steps below to install product correctly:

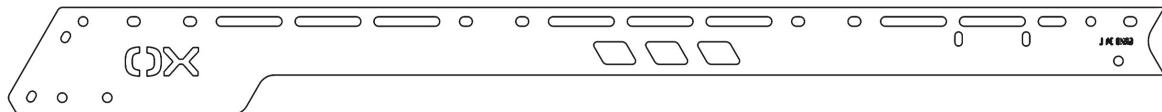

1. Start by preparing the product parts and gathering the necessary tools.

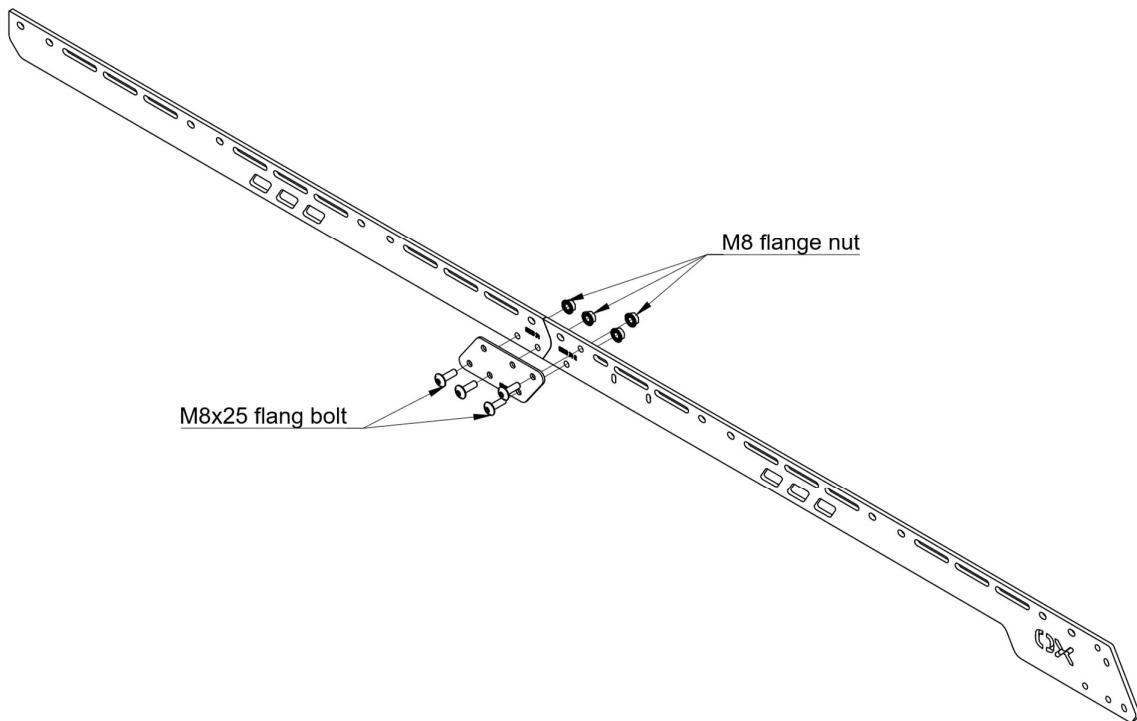

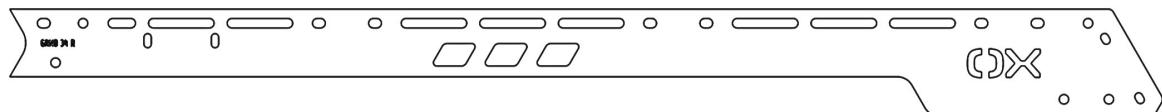

BISON GEAR

2. Assemble the small connectors and rails using **M8x25 bolts** and **M8 flange nuts** (assemble both the left and right sides of the roof rack). The front rails are side-specific and are marked with **L** (left) or **R** (right). Only pre-screw the bolts.

Front rail – left side

Front rail – right side

(Picture illustrate the right side of the roof rack rail, the left side is a mirror view)

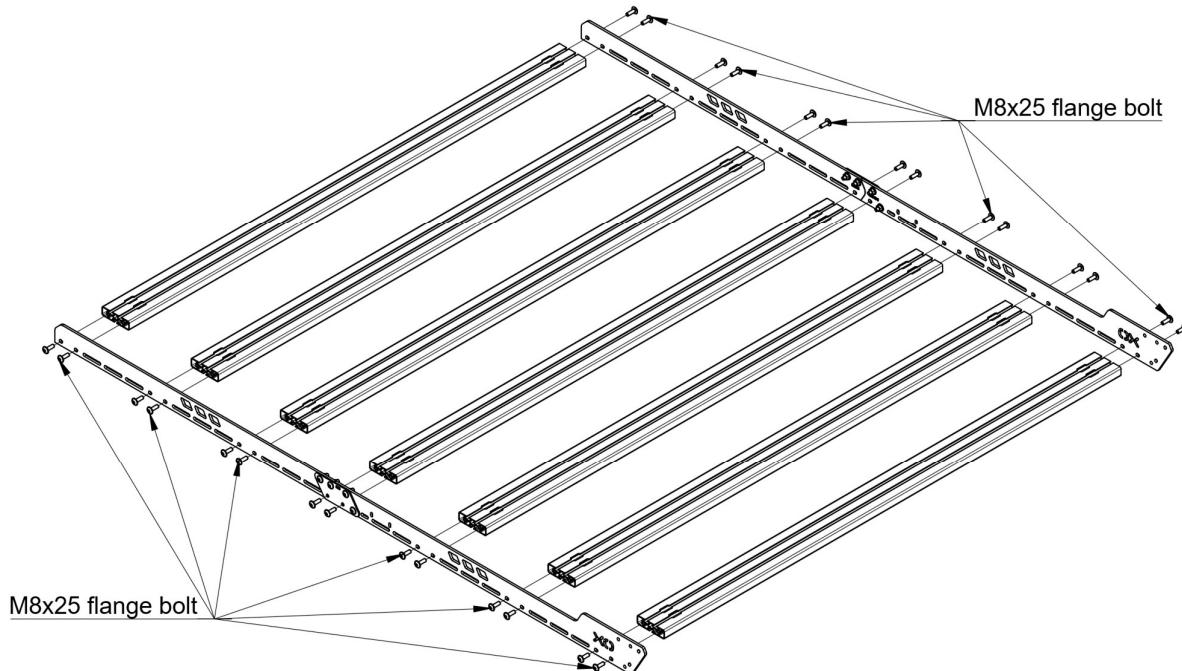

BISON GEAR

3. Assemble the side parts of the roof rack with the crossbars using **M8x25 bolts**. At first, only pre-screw all bolts. It is recommended to mount the roof rack upside down on a flat surface to ensure the top side is perfectly flat.

*****Important**

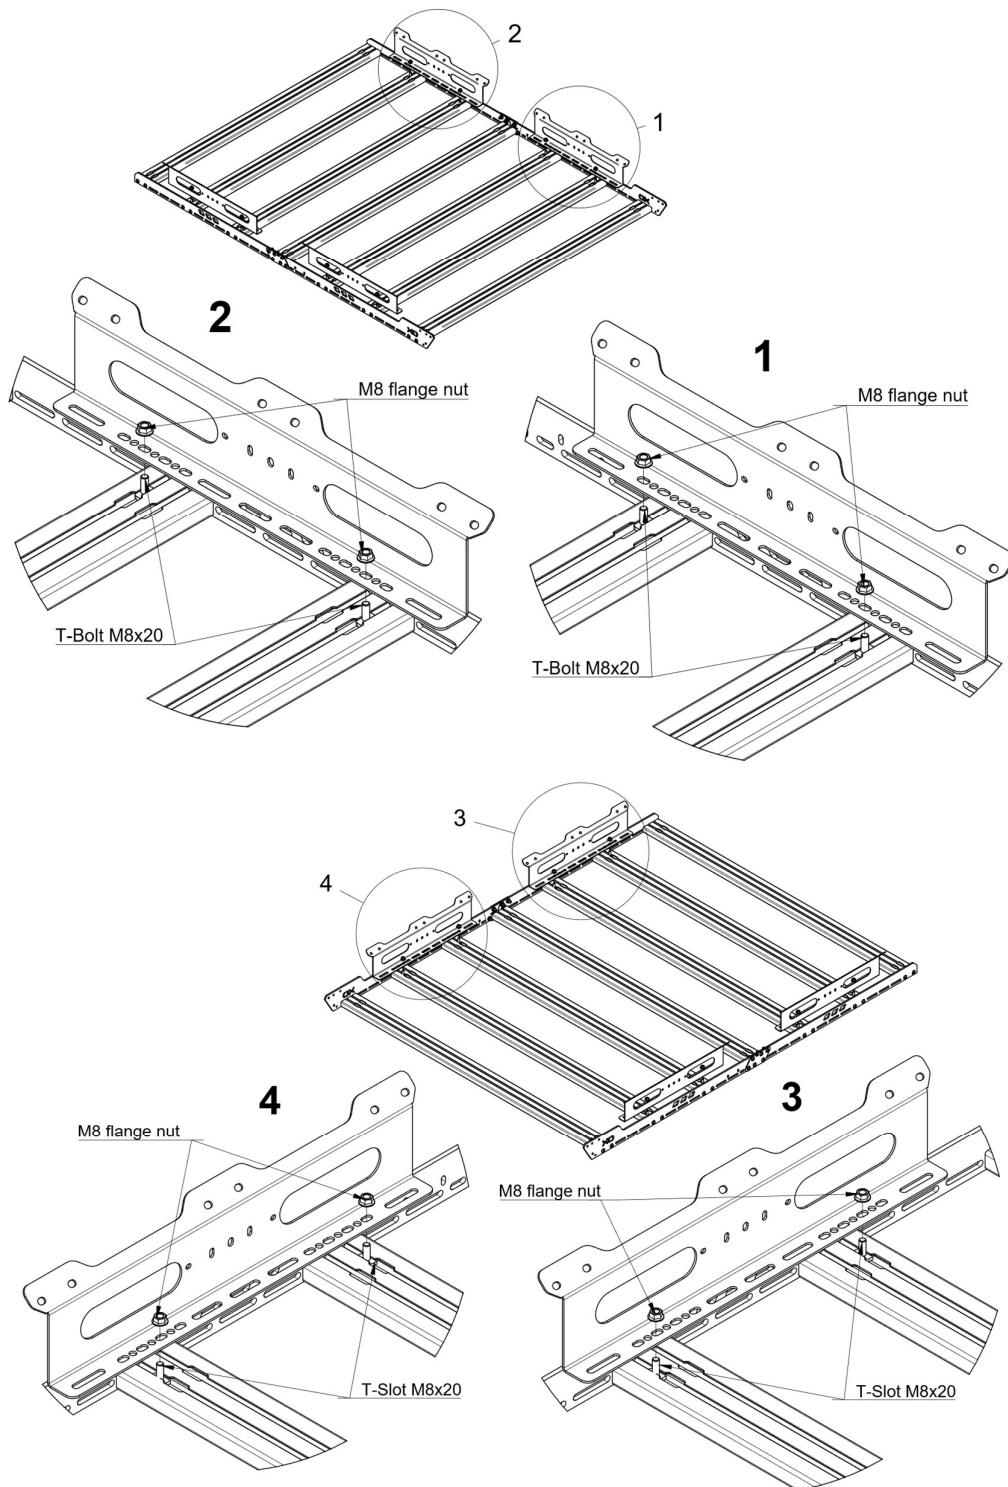

The Bison Gear crossbar features one T-slot on one side and two T-slots on the other. It is symmetrical, allowing it to be mounted on the roof rack in either direction. If you wish to change the orientation, simply unscrew the four bolts and switch sides.

4. Pre-screw the large roof brackets. Use the **T-bolts M8x20** and **M8 flange nuts**. (the crossbars has a special hole on the slot which able to slide the T-Bolts into the slot.) The position of the large brackets is illustrated below. Pre-screw all four brackets (two on the left and two on the right side of the roof rack).

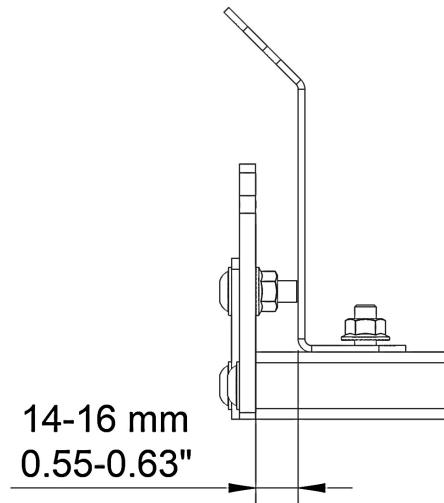

BISON GEAR

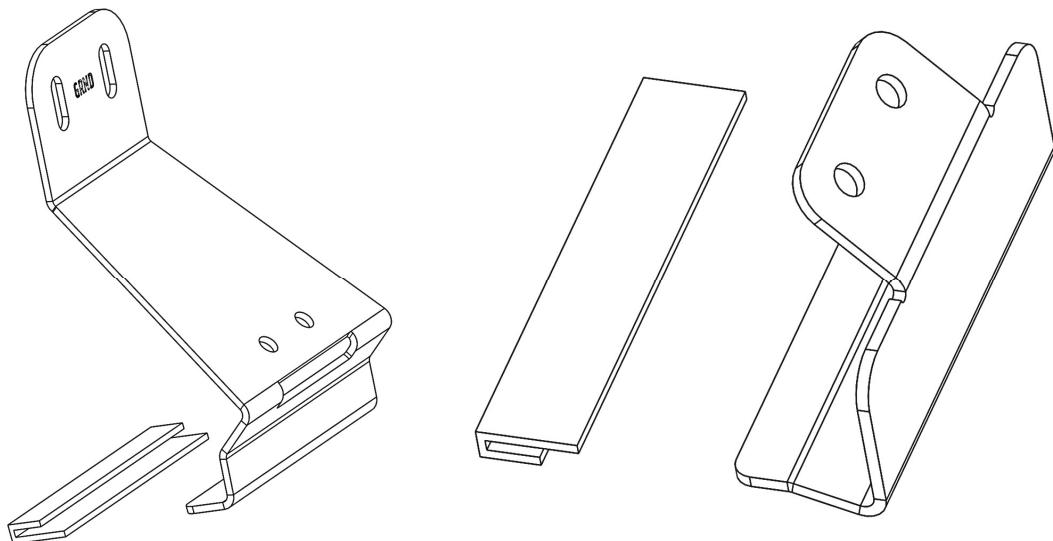

BISON GEAR

5. Before tightening fully, adjust the distance between the large roof bracket and the railings to **14-16 mm (0.55"-0.63")**, then slightly tighten the nuts so the bracket stays in place but can still be fine-tuned; the main tightening should be done after placing the rack on the roof

6. Trim the rubber edge protection to the required length, then carefully place it over the support brackets and clamps, ensuring it fits securely and fully covers all sharp edges to prevent damage.

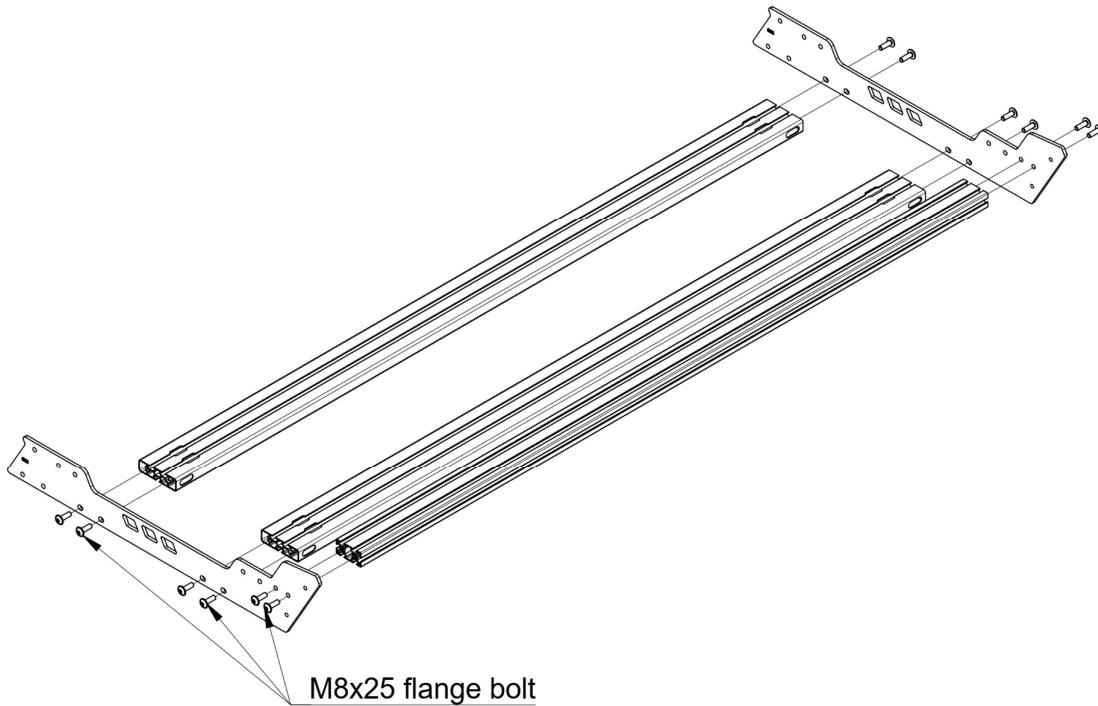

BISON GEAR

7. Assemble the side parts of the $\frac{1}{4}$ roof rack part with the crossbars using **M8x25 bolts**. At first, only pre-screw all bolts. It is recommended to mount the roof rack upside down on a flat surface to ensure the top side is perfectly flat.

*****Important**

The Bison Gear crossbar features one T-slot on one side and two T-slots on the other. It is symmetrical, allowing it to be mounted on the roof rack in either direction. If you wish to change the orientation, simply unscrew the four bolts and switch sides.

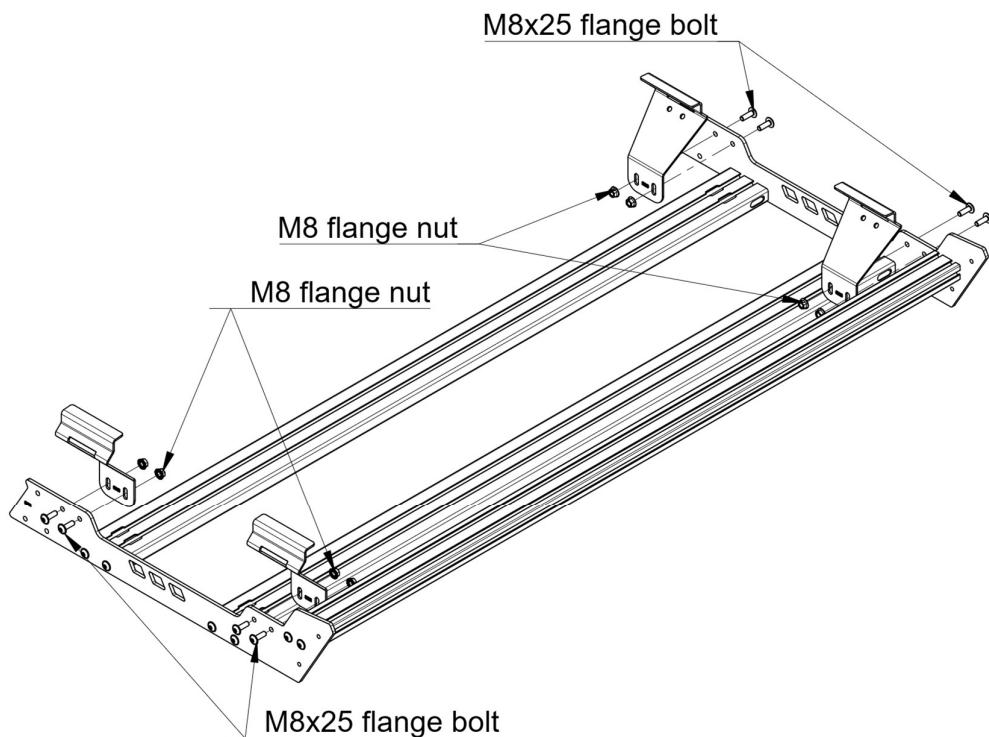

BISON GEAR

8. Pre-screw the support brackets to the side rails using **M8x25 bolts** and **M8 flange nuts**.

The bolts should be tighten after installing on the roof.

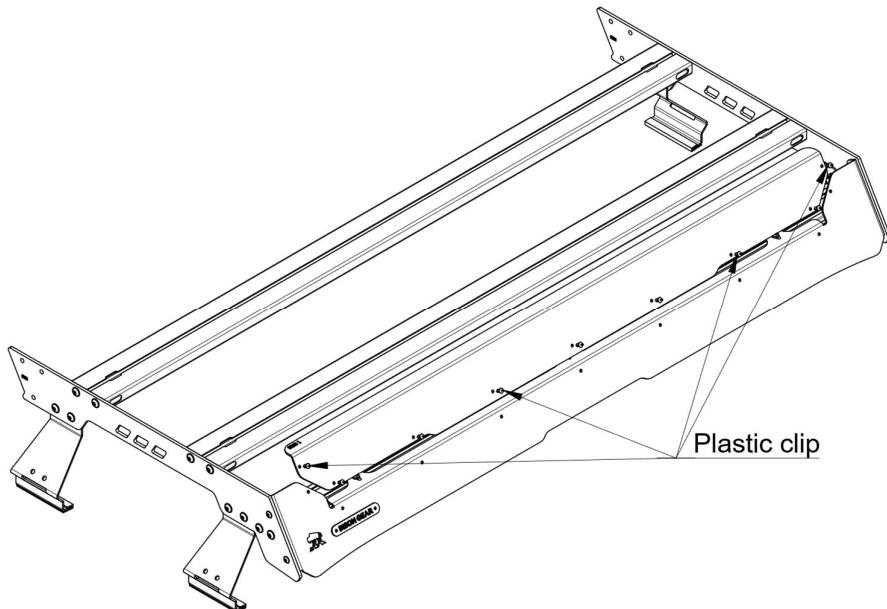

BISON GEAR

9. *****(That point refers only to the standard version)**

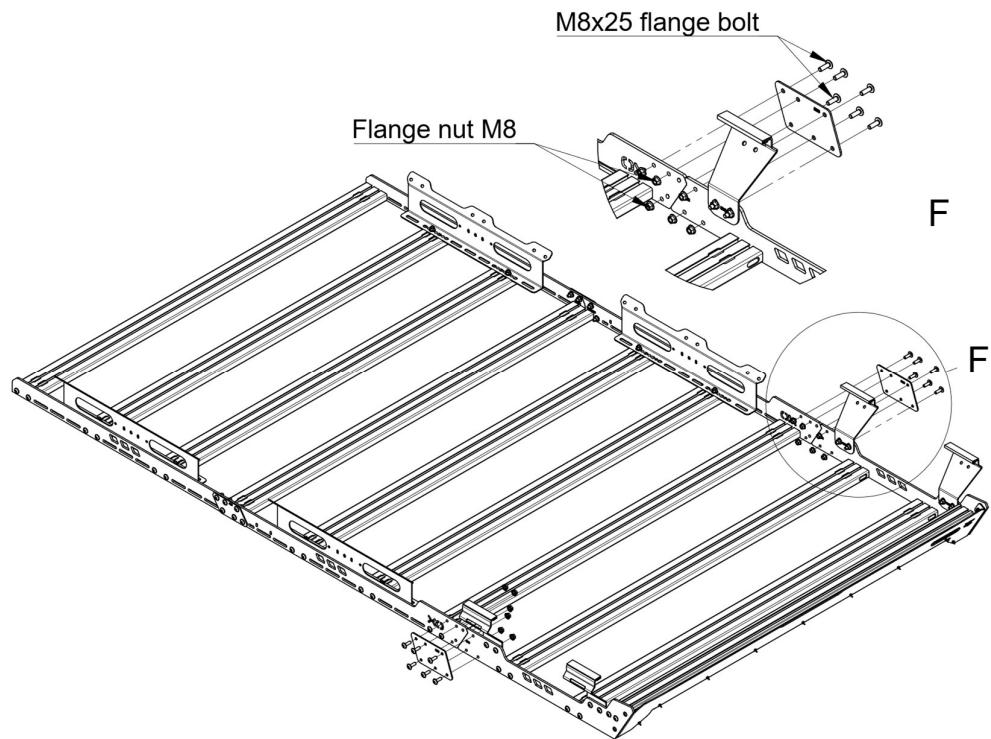

For the standard version, place the cover on the wind deflector. Insert the plastic clips into the holes, then press the pins down until they lock with the clips. If necessary, use a hammer to gently tap them into place.

BISON GEAR

10. Join together the small part ($\frac{1}{4}$) and the large part ($\frac{3}{4}$) of the roof rack.
Use large connectors, M8x25 flange bolts, M8 flange nuts.

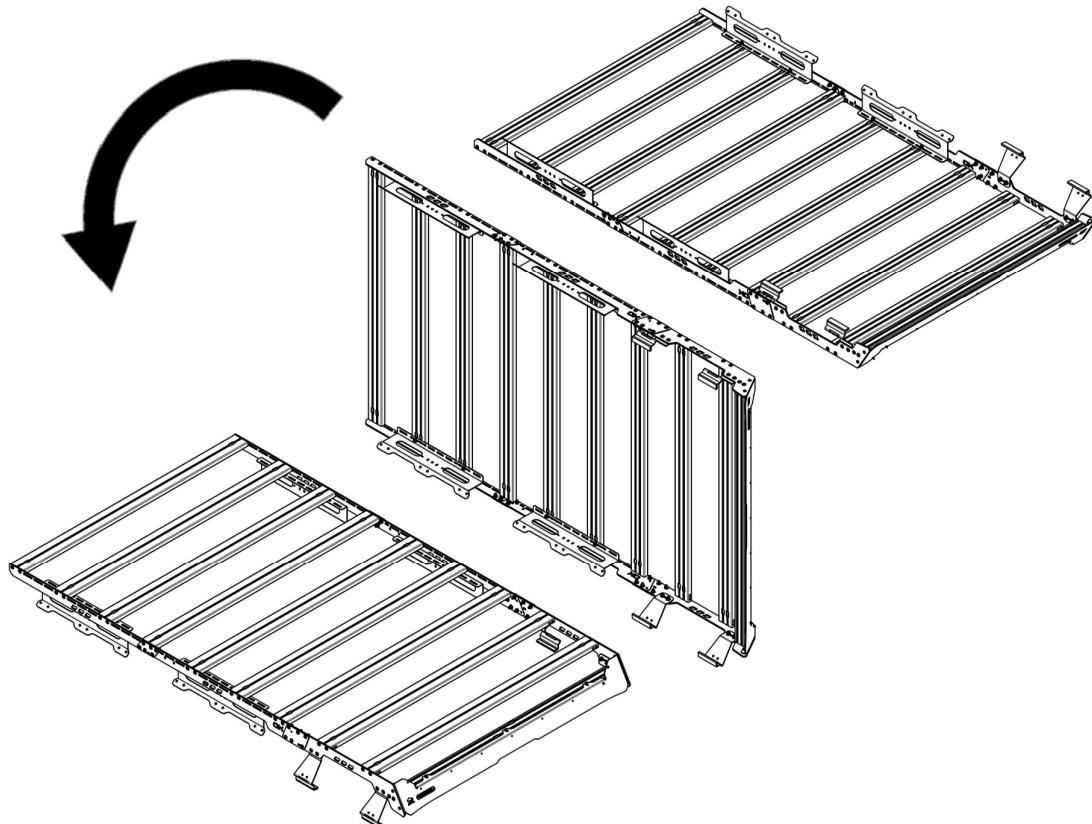

11. Make sure that top surface of the roof rack is perfectly flat. Tighten the bolts and nuts.

BISON GEAR

12. Turn the roof rack backside down.

13. The roof rack preparation is done. The next part of instruction refers to installation on the car. Before you starts prepare some parts:

- Clamps
- M8x25 flange bolts
- M8 flange nuts
- Small roof brackets
- M6x16 flange bolts

BISON GEAR

14. Remove the factory bolts from the roof bars using a TX30 bit or screwdriver, then install the small roof rack brackets with the same bolts, repeating the process for all **12 brackets**.

15. Tighten the bolts.

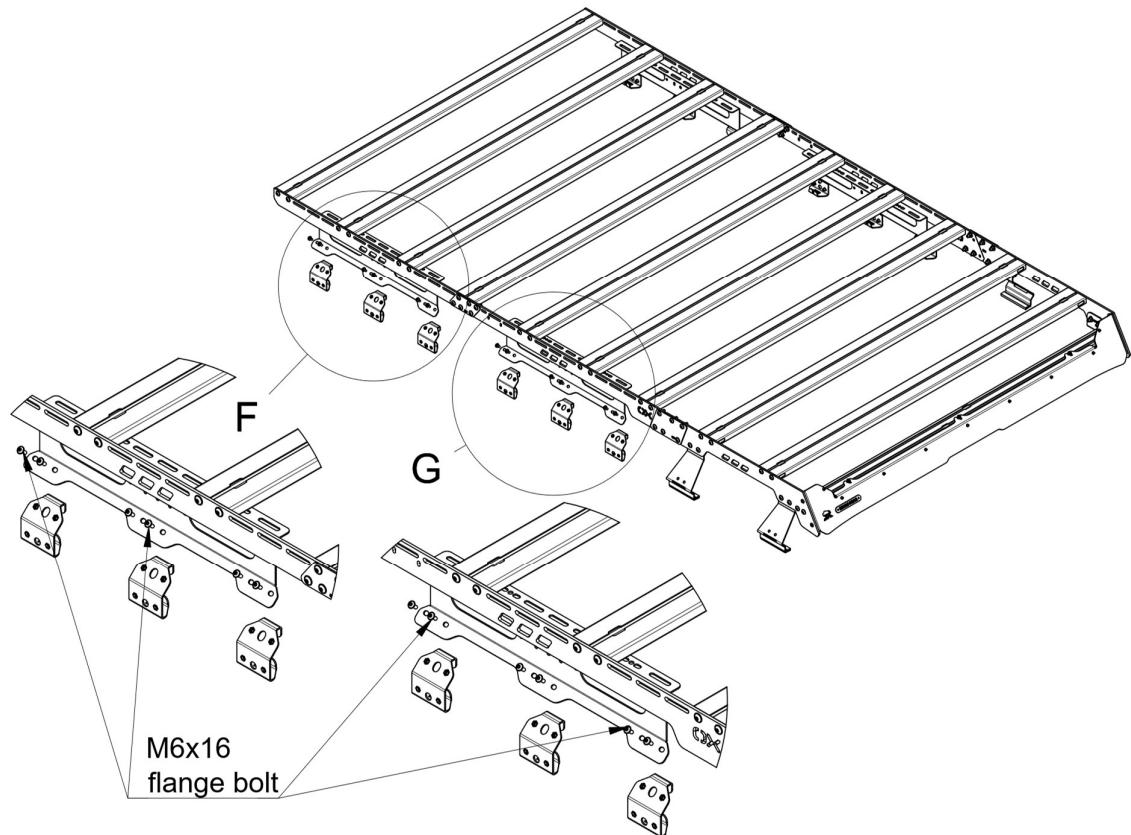

***** Important!**

In the next step, you will need the assistance of at least one adult to help lift the entire construction onto the roof.

BISON GEAR

16. Place the roof rack on the roof and pre-screw the large bracket to the previously installed small bracket using **M6x16 flange bolts**.

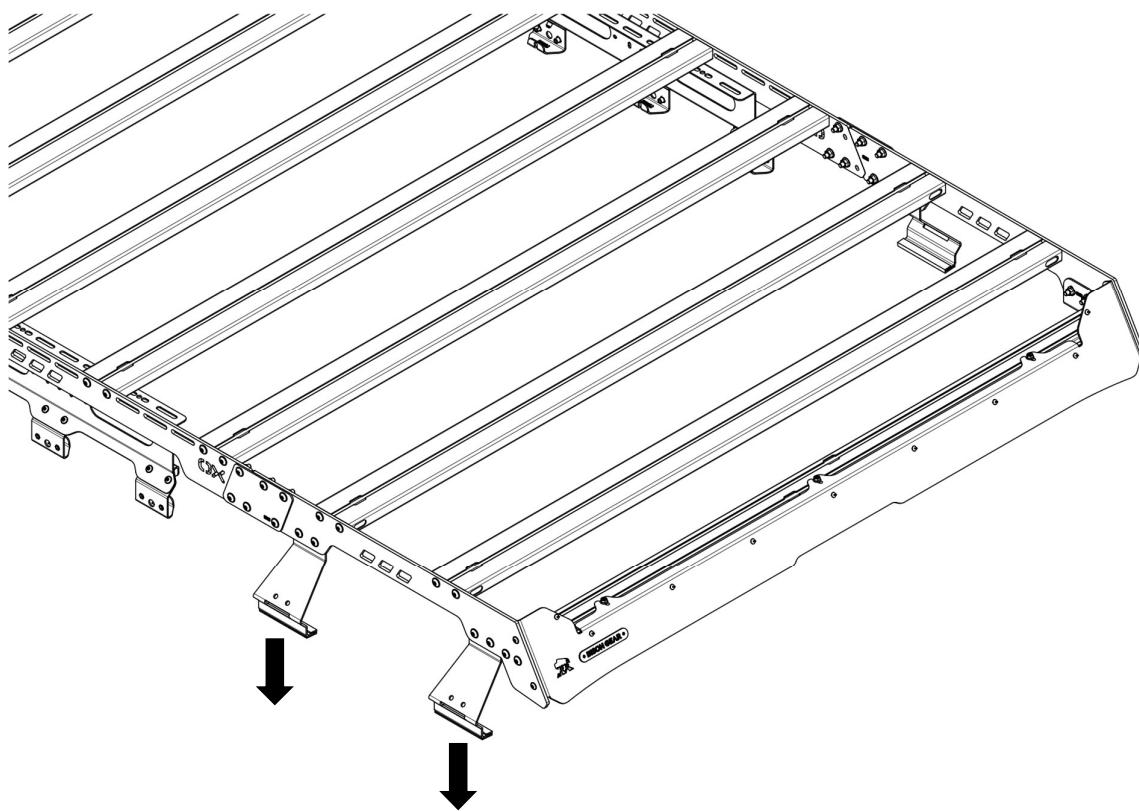

17. Tighten the **M6x16 flange bolts**.

BISON GEAR

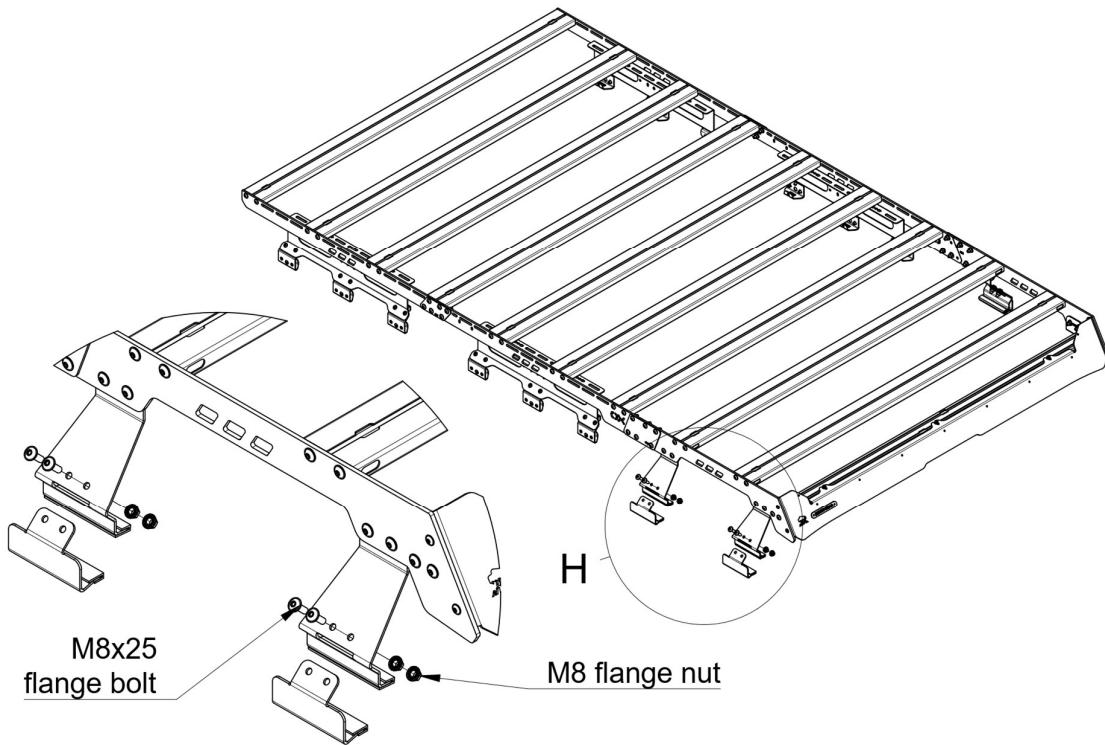

18. Adjust the front support brackets by placing them on the car's gutter under tension to support the roof rack, then secure with **M8x25 flange bolts** and **nuts**.

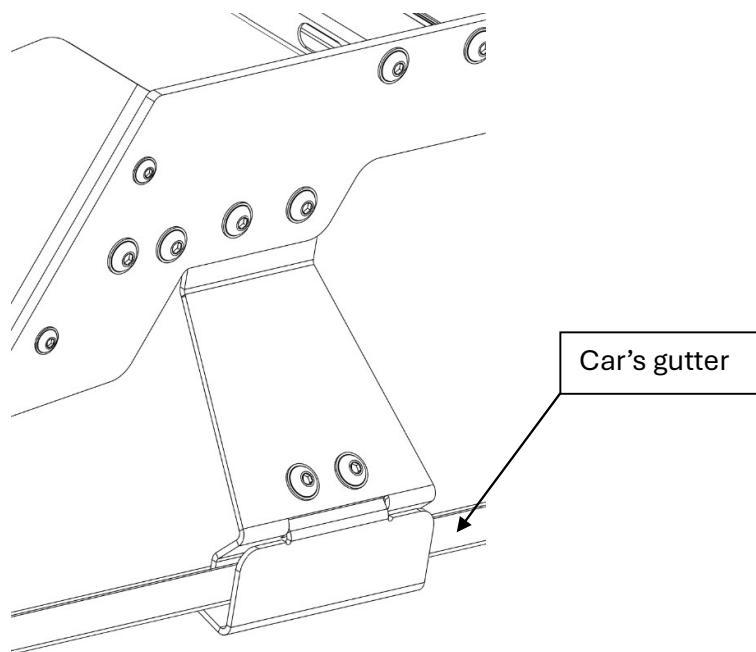

BISON GEAR

19. Place the **clamp** on the each support bracket and screw it using **M8x25 flange bolts** and **M8 nuts**. (The clamp should be inserted into the slot of the bracket).

After assembly

BISON GEAR

20. Tighten the bolts.

Make sure that everything is mounted properly, and all the bolts are tightened. If it everything is correct, your work is done.

After driving 50km with rack on the roof, check all the bolts and retighten them if necessary.
